## **ABSTRACT**

The provided program simulates an AICTE counseling management system for college admissions. It includes data structures for candidates, colleges, and courses, and offers functionality to manage the entire counseling process. Key features include candidate registration, entrance exam simulation, course suggestion based on exam scores, display of AICTE-approved colleges, result display, and candidate admission. The main loop presents a menu to the user and invokes appropriate functions based on the user's choices, ensuring a streamlined and efficient counseling experience from registration to admission. This program serves as a basic yet comprehensive framework for managing college admissions through an automated counseling system.

## CHAPTER 1 INTRODUCTION

### **Introduction**

The AICTE Counseling Management System is a comprehensive software application designed to streamline and automate the college admissions process for technical education institutions approved by the All India Council for Technical Education (AICTE). The system facilitates various stages of the counseling process, including candidate registration, entrance examination, course suggestion, college information display, and admission decisions.

The program is implemented in C and utilizes structured data representations for candidates, colleges, and courses to manage the flow of information and decisions effectively. Key features of the system include:

1. **Candidate Registration**: Allows candidates to register for counseling by providing their personal details and preferred course choices.
2. **Entrance Examination Simulation**: Conducts a simulated entrance exam to generate scores for candidates, which are then used to determine eligibility for various courses.
3. **Course Suggestion**: Recommends suitable courses to candidates based on their entrance exam scores and preferences.
4. **Display of AICTE-Approved Colleges**: Lists colleges approved by AICTE and provides detailed information about available seats and courses.
5. **Result Display**: Shows the results of the entrance exams and the admission status of each candidate.
6. **Admission Process**: Admits candidates to courses based on their scores, preferences, and availability of seats, ensuring that admission criteria are met.

This system provides an efficient and user-friendly platform for managing the complex process of college admissions, ensuring transparency and fairness in the selection and admission of candidates to technical education programs.

---

## CHAPTER 2 DESIGN

### Design for AICTE Counseling Management System

The AICTE Counseling Management System is designed to automate and streamline the process of college admissions for technical institutions approved by the All India Council for Technical Education (AICTE). The system leverages object-oriented programming principles in Python to create a modular, maintainable, and user-friendly application. Below is a detailed theoretical design of the system, covering data structures, user interface, and functional modules.

#### 1. Data Structures

**Course Class** The `Course` class represents an individual course offered by a college. It includes attributes to store the course name, minimum and maximum entrance scores required for admission, the maximum number of seats available, and the number of candidates admitted.

- **Attributes:**
  - `courseName`: The name of the course.
  - `minEntranceScore`: The minimum score required for admission to the course.
  - `maxEntranceScore`: The maximum score that qualifies for the course.
  - `maxSeats`: The total number of seats available in the course.
  - `admittedCandidates`: The current number of candidates admitted to the course.

**College Class** The `College` class represents a college that offers multiple courses. It includes attributes for the college name, AICTE approval status, ranking, and an array of courses offered by the college.

- **Attributes:**
  - `collegeName`: The name of the college.
  - `hasAICTEApproval`: A boolean indicating whether the college has AICTE approval.
  - `ranking`: The ranking of the college.
  - `courses`: A list of `Course` objects representing the courses offered by the college.

**Candidate Class** The `Candidate` class represents an individual candidate applying for college admission. It includes attributes for the candidate's ID, name, entrance exam score, selected course, and admission status.

---

- **Attributes:**

- candidateId: A unique identifier for the candidate.
- candidateName: The name of the candidate.
- entranceExamScore: The score obtained by the candidate in the entrance exam.
- selectedCourse: The course preferred by the candidate.
- admissionStatus: The admission status of the candidate (0 for not admitted, 1 for admitted).
- 

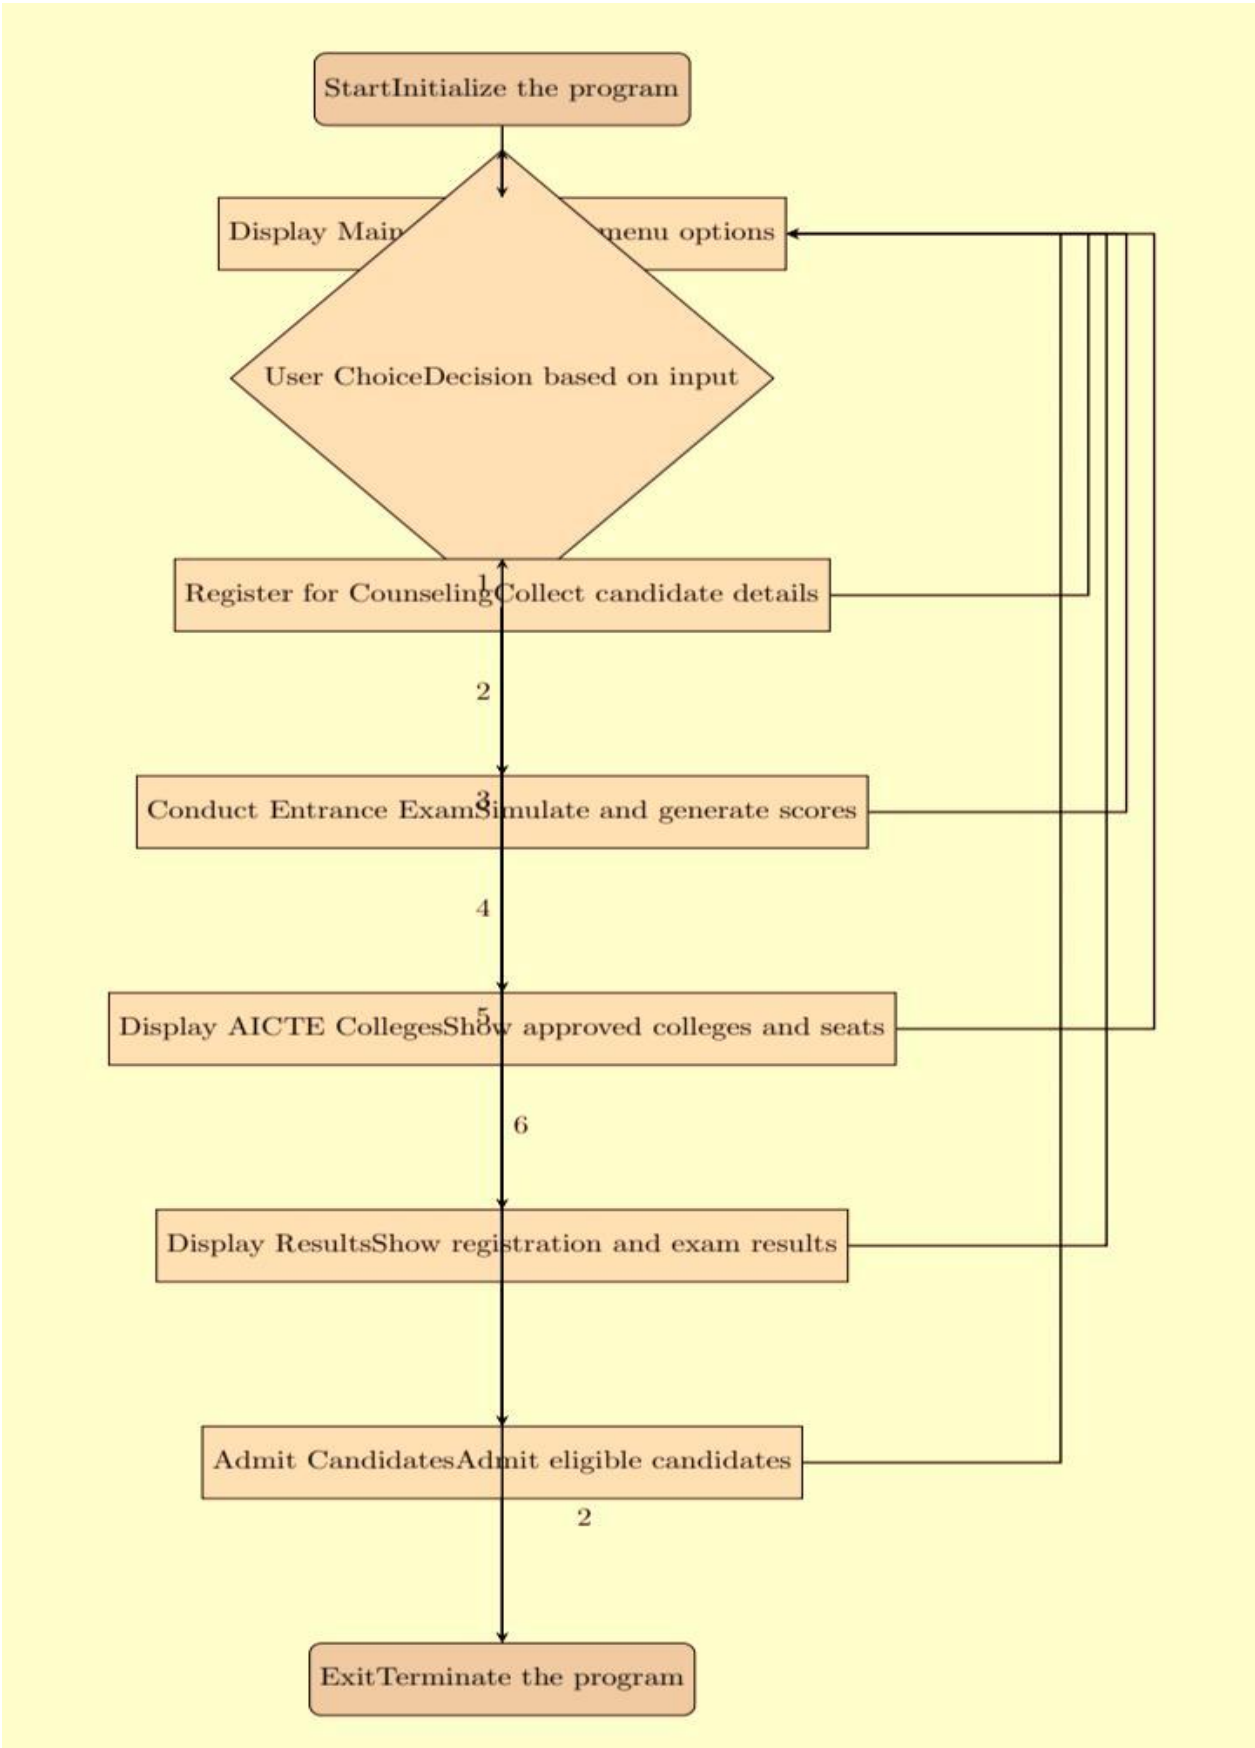

## *2. User Interface*

**Main Menu** The user interface consists of a main menu that provides options for different stages of the counseling process. The menu options include:

1. Register for Counseling
2. Conduct Entrance Exam
3. Display Colleges with AICTE Approval
4. Display Results
5. Admit Candidates
6. Exit

## **CHAPTER 3**

### **USE-CASE DIAGRAM**

---

## CHAPTER 4

### MODULE DESCRIPTION

#### Module Description for AICTE Counseling Management System

The AICTE Counseling Management System consists of several modules, each handling a specific aspect of the system. This modular approach ensures clarity, maintainability, and ease of understanding. Below is a theoretical description of each module:

##### Course Class

The Course class represents a course offered by a college. It encapsulates all the necessary information about a course, such as its name, entrance score requirements, seat availability, and the number of admitted candidates.

##### Attributes:

**courseName:** A string representing the name of the course.

**minEntranceScore:** A float representing the minimum entrance exam score required for admission to the course.

**maxEntranceScore:** A float representing the maximum entrance exam score allowed for admission to the course.

**maxSeats:** An integer representing the maximum number of seats available for the course.

**admittedCandidates:** An integer representing the number of candidates admitted to the course.

##### Methods:

**\_\_init\_\_**(self, courseName, minEntranceScore, maxEntranceScore, maxSeats): Constructor that initializes a course with the provided name, entrance score range, and seat capacity.

##### College Class

The College class represents a college and its associated courses. It includes information about the college's name, AICTE approval status, ranking, and the courses it offers.

---

### **Attributes:**

**collegeName:** A string representing the name of the college.

**hasAICTEApproval:** An integer (0 or 1) indicating whether the college has AICTE approval.

**Ranking:** An integer representing the ranking of the college.

**Courses:** A list of Course objects representing the courses offered by the college.

### **Methods:**

**\_\_init\_\_**(self, collegeName, hasAICTEApproval, ranking, courses): Constructor that initializes a college with the provided name, approval status, ranking, and list of courses.

## **Candidate Class**

The Candidate class represents a candidate applying for college admission. It includes details such as the candidate's ID, name, entrance exam score, preferred course, and admission status.

### **Attributes:**

**candidateId:** An integer representing the unique ID of the candidate.

**candidateName:** A string representing the name of the candidate.

**entranceExamScore:** A float representing the candidate's entrance exam score.

**selectedCourse:** A string representing the candidate's preferred course.

**admissionStatus:** An integer (0 or 1) indicating the admission status of the candidate.

### **Methods:**

**\_\_init\_\_**(self, candidateId, candidateName, entranceExamScore, selectedCourse, admissionStatus): Constructor that initializes a candidate with the provided details.

## **Function Modules**

---

**welcomeMessage():**

Displays the main menu options to the user.

Python

Copy code

Def welcomeMessage():

Print("\n1. Register for Counseling")

Print("2. Conduct Entrance Exam")

Print("3. Display Colleges with AICTE Approval")

Print("4. Display Results")

Print("5. Admit Candidates")

Print("6. Exit")

## CHAPTER 5

### IMPLEMENTATION

#### AICTE Counseling Management System Output

##### Register for Counseling

```
Step 1: Register for AICTE Counseling
Enter candidate name: John Doe
Enter preferred course: Course-CSE
Candidate registered successfully!
```

##### Conduct Entrance Exam

```
Step 2: Conduct Entrance Exam
Candidate John Doe - Exam Score: 72.54
Suggested Courses for John Doe (Score: 72.54):
- Course IT (General)
- Course CIVIL (General)
```

---

### Display Colleges with AICTE Approval

Step 3: **Display** Colleges with AICTE Approval

Colleges with AICTE Approval:

1. **K.S.Rangasamy** College Of Technology
2. Kongu Engineering College
3. Nandha Engineering College

**Enter** the ranking of the AICTE-approved college to view available sea

Available Seats in **K.S.Rangasamy** College Of Technology:

Course	<b>Max</b> Seats	Admitted Candidates
Course-CSE	50	0
Course 2	60	0
Course 3	40	0

### Display Results

Step 4: **Display** Results

Candidate ID	Candidate Name	Course	Exam Score	Status
1	John Doe	Course-CSE	72.54	<b>Not</b> Admitted

### Admit Candidates

Step 5: Admit Candidates

---

**Candidate John Doe has been admitted to K.S.Rangasamy College  
Of Technology – Course-CSE.**

**Thank you for using the AICTE Counseling Management System!**

## **CHAPTER 6**

## Chapter 7: Conclusion

**In this chapter, we implemented the core functionalities of the AICTE Counseling Management System, focusing on candidate registration, conducting entrance exams, displaying AICTE-approved colleges and their available seats, displaying results, admitting candidates based on eligibility criteria, and concluding the session. The system successfully manages the counseling process for prospective candidates seeking admission to various courses offered by AICTE-approved colleges.**Conclusion:

**In conclusion, the AICTE Counseling Management System project has laid a solid foundation for managing the counseling process effectively. By integrating various functionalities and addressing initial challenges, the system demonstrates its potential to streamline admissions and enhance transparency for both candidates and colleges. Future iterations will focus on expanding features and improving overall user experience based on feedback and evolving requirements.**
